SUMMARY

Senior Frontend Developer with 5 years of experience building and leading production web platforms in fintech and internal operations. Currently technical lead on a multi-country digital banking platform, owning the web layer end-to-end and independently building serverless verification services. Strong track record of shipping and maintaining systems used daily by real teams, with a mature AI-assisted development workflow.

EXPERIENCE

Senior Frontend Developer | Ramaaz — Remote/On-site 2021 – Present

Progressed from frontend developer to technical lead across two flagship products:

Multi-Country Digital Banking Platform — Technical Lead (3-person team) *Next.js, Cloudflare Workers, AWS Rekognition*

- Lead a pre-launch digital banking platform serving 5 countries (Syria, Lebanon, Iraq, Turkey, Jordan) with multi-currency accounts: local currencies, USD, gold, and silver.
- Analyze product designs and scenarios, break them into tasks, and coordinate delivery across mobile and backend developers.
- Independently designed and built a fully automated KYC pipeline as a Next.js service on Cloudflare Workers, using AWS Rekognition for ID data extraction, liveness detection, and face-matching against the submitted ID/passport across 5 national document formats — zero manual steps, relaying verification decisions to the core NestJS backend.
- Built face-based passcode recovery for verified accounts and security-question flows for unverified ones, alongside Face ID and passcode authentication.
- Own the platform's web layer end-to-end — internal management dashboard, business dashboard, and customer-facing web app — covering send/receive payments, payment requests, and QR scanning.

Employee Operations Dashboard — Frontend Lead (2-person team) *React, Redux-Saga, Pusher*

- Built the frontend of an internal operations dashboard used by 50+ employees, processing hundreds of customer tickets daily for crypto deposits and top-ups via WhatsApp.
- Implemented real-time ticket and messaging flows with Pusher, ensuring agents receive customer WhatsApp messages instantly.
- Led frontend migration from a third-party WhatsApp gateway to the official Meta WhatsApp Business API with message templates — improving reliability and compliance and eliminating number-ban risk.
- Sole frontend owner since the 2024 launch, evolving the codebase with ongoing features and improvements.

FREELANCE PROJECTS

Full-Stack Developer — Freelance 2021 – Present

- Designed and delivered a marketing website for a bag-printing business in Riyadh, Saudi Arabia, handling the project end-to-end from design to deployment.
- Delivered 5+ full-stack web projects for private clients across frontend and backend.

SKILLS

- **Frontend:** React, Next.js, TypeScript, JavaScript, Redux (incl. Redux-Saga), Tailwind CSS, responsive & real-time UIs
- **Platform & Backend:** Cloudflare Workers, serverless architecture, AWS Rekognition, REST APIs, Node.js, Docker (dev environments), Pusher/WebSockets
- **AI-Assisted Development:** Claude Code with a customized spec-driven workflow (SpecKit: specify, plan, tasks, implement) with review/approval gates for sensitive changes; built custom agent skills (incl. design) and MCP integrations (ClickUp) for automated ticket creation and updates; GitHub Copilot for inline completions
- **Practices:** Requirements analysis, task breakdown and delegation, design-to-code from Adobe XD, Git/GitHub, Meta WhatsApp Business API integration

EDUCATION

B.Sc. in Software Engineering | University of Aleppo 2017 – 2022

LANGUAGES

- **Arabic:** Native • **English:** Professional working proficiency
